ROUND 1

PLATFORM-TO-PLATFORM SHOOTOUT AT "VIBE-DIAGRAMMING"

Premise

- Same challenge, different model instincts
- The test was not just correctness — it was taste, hierarchy, and visual honesty
- Can the model diagram the messy truth instead of a fake happy path?

Copilot's V1 Design (using GPT 5.4 Thinking)

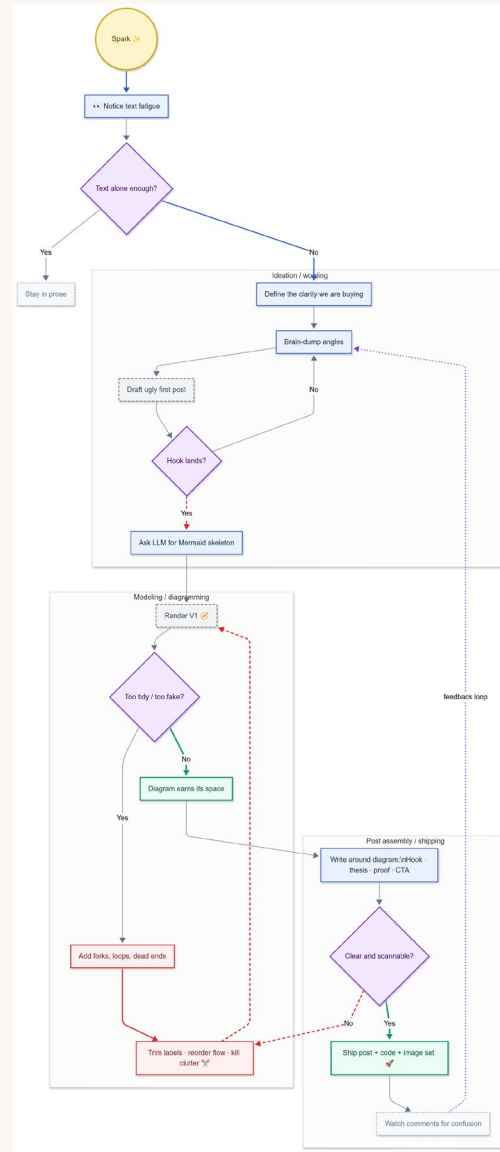

What to notice

- Strong architectural framing
- Clear phase separation
- Feels the most like a deliverable, not just an answer

Judge's note

A practical, presentation-ready interpretation with solid system thinking and clean screenshot value.

 Copilot V1

Perplexity's V1 Design (using Auto)

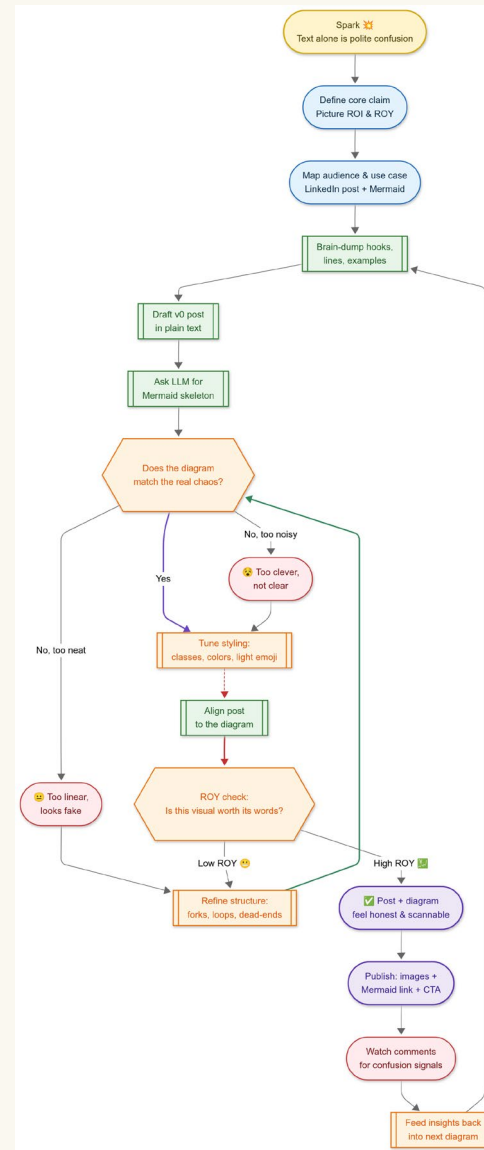

What to notice

- Pragmatic structure
- ROI / ROY thinking
- Tighter business framing than artistic flourish

Judge's note

Efficient, grounded, and useful — less theater, more utility.

 Perplexity V1

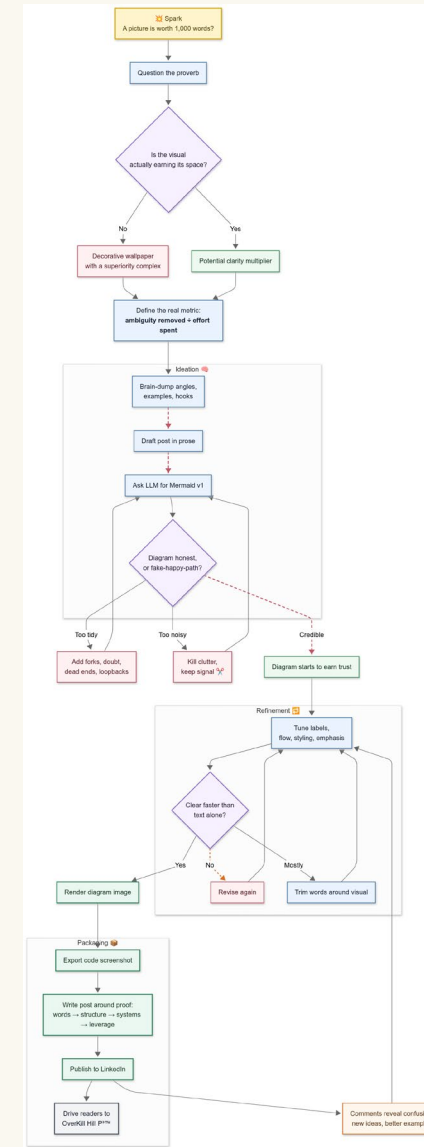

ChatGPT's V1 Design (using GPT 5.4 Thinking)

What to notice

- Balanced composition
- Strong loop logic
- Good blend of branding, structure, and presentational polish

Judge's note

A well-rounded entry that tries to do everything: clarity, hierarchy, and a little swagger.

Gemini's V1 Design (using Gemini 3 Thinking)

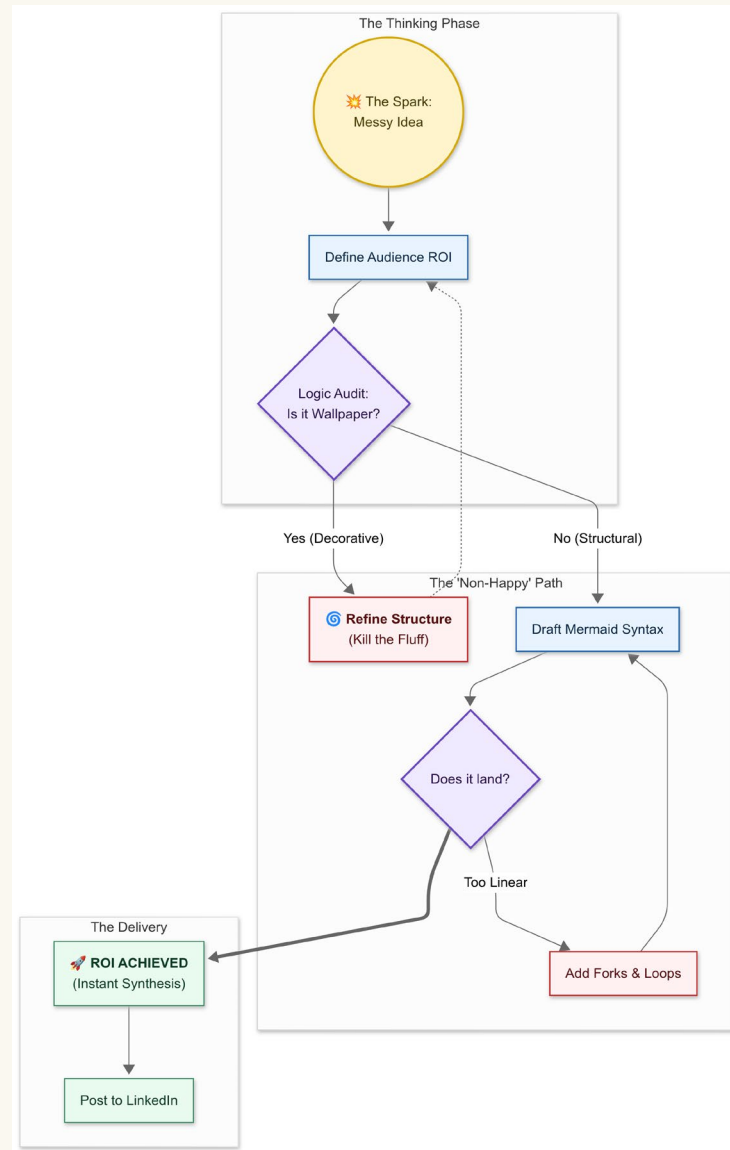

What to notice

- Watch for synthesis and reduction
- Does it simplify without flattening the idea?
- Does the structure feel intelligent or merely tidy?

Judge's note

This is the slide to ask whether elegance came from insight... or just restraint.

 Gemini V1

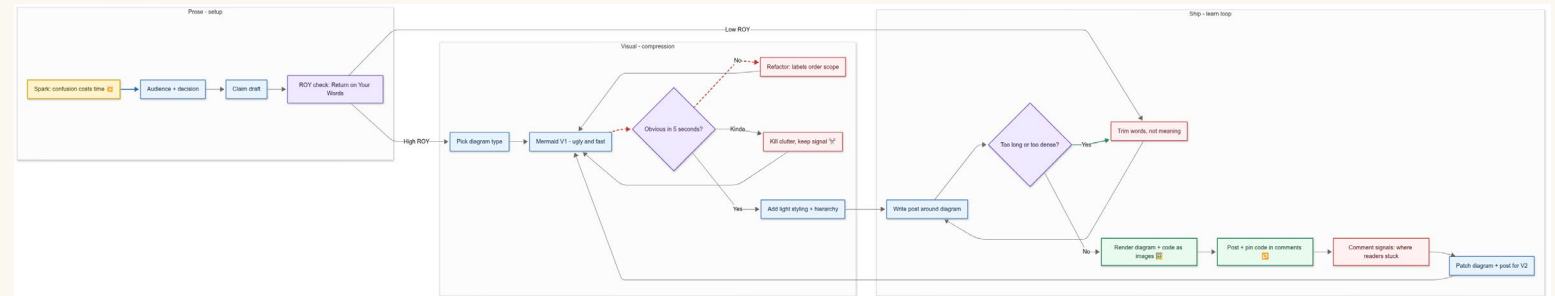

Notion's V1 Design (using Auto)

What to notice

- Clean lane logic
- Minimalist composition
- Useful separation between setup, compression, and shipping

Judge's note

Quietly effective. Less “look what I can do,” more “here’s the shape of the thing.”

ROUND 2

IMPROVE UPON “VIBED-DIAGRAM” THROUGH LESSONS LEARNED

Next challenge

- Respond to critique
- Use more of Mermaid’s toolbox
- Keep the visual honest, but make it more stage-worthy

Copilot's RE-Design (using GPT 5.4 Thinking)

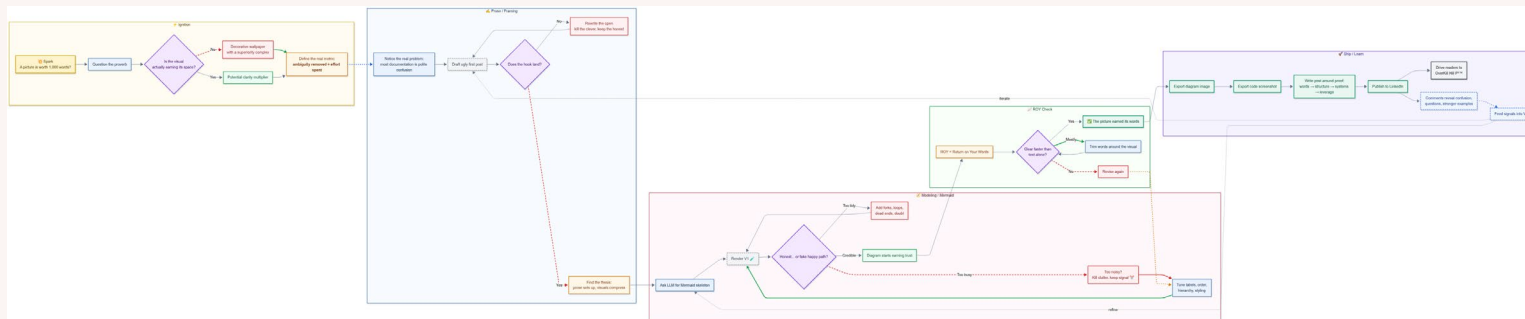

What to notice

- Did it keep its strong architecture?
- Does the redesign improve emotion without losing discipline?
- Is it still the most boardroom-ready piece?

Judge's note

A strong contender if the V2 adds flair without sacrificing its original structural advantage.

 Copilot V2

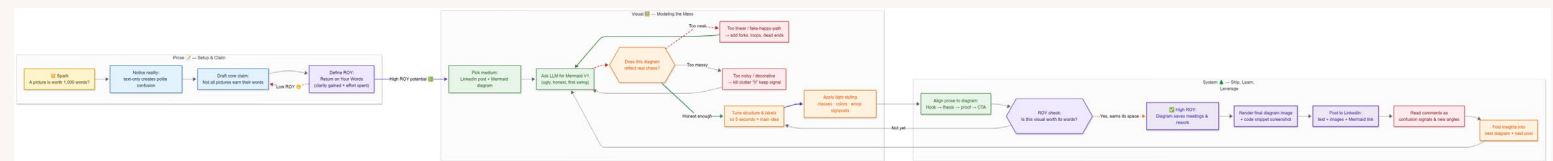

Perplexity's RE-Design (using Auto)

What to notice

- Has the practical framing become more visually memorable?
- Did the redesign preserve clarity under added complexity?
- Is the business logic still the star?

Judge's note

The test here is whether pragmatism can also become beautiful.

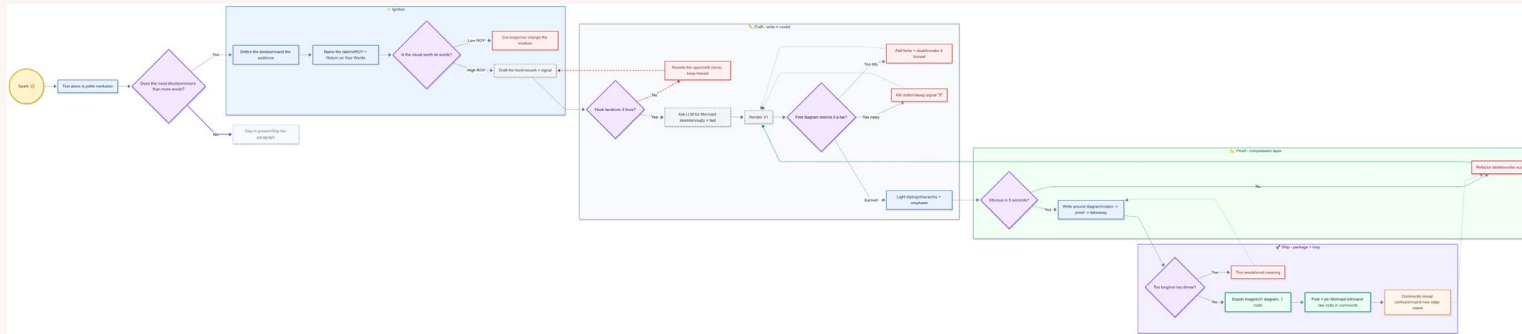

Notion's RE-Design (using Auto)

What to notice

- Cleaner lanes or richer lanes?
- Did the redesign deepen the concept without muddying the calm?
- Is the minimalism still doing useful work?

Judge's note

This one wins if restraint survives iteration.

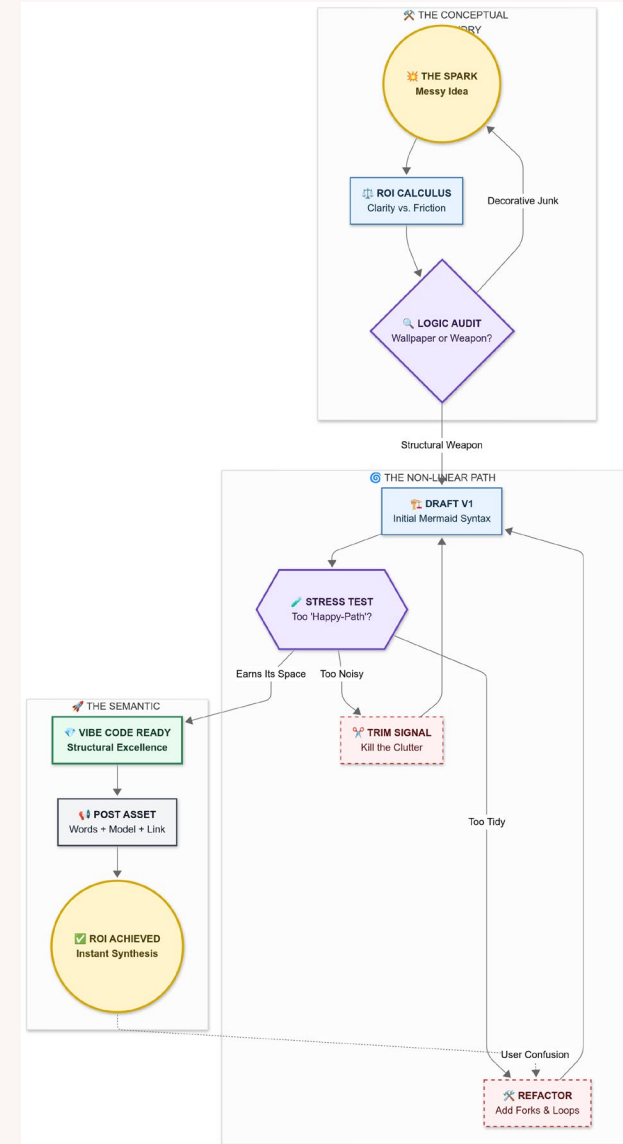

Gemini's RE-Design (using Gemini 3 Thinking)

What to notice

- Does V2 reveal stronger visual conviction?
- Has the model found a distinct point of view?
- Does the design feel synthesized rather than generic?

Judge's note

Round 2 is where a balanced model either separates itself... or disappears into "pretty enough."

Claude's RE-Design (using Sonnet 4.6 Extended Thinking)

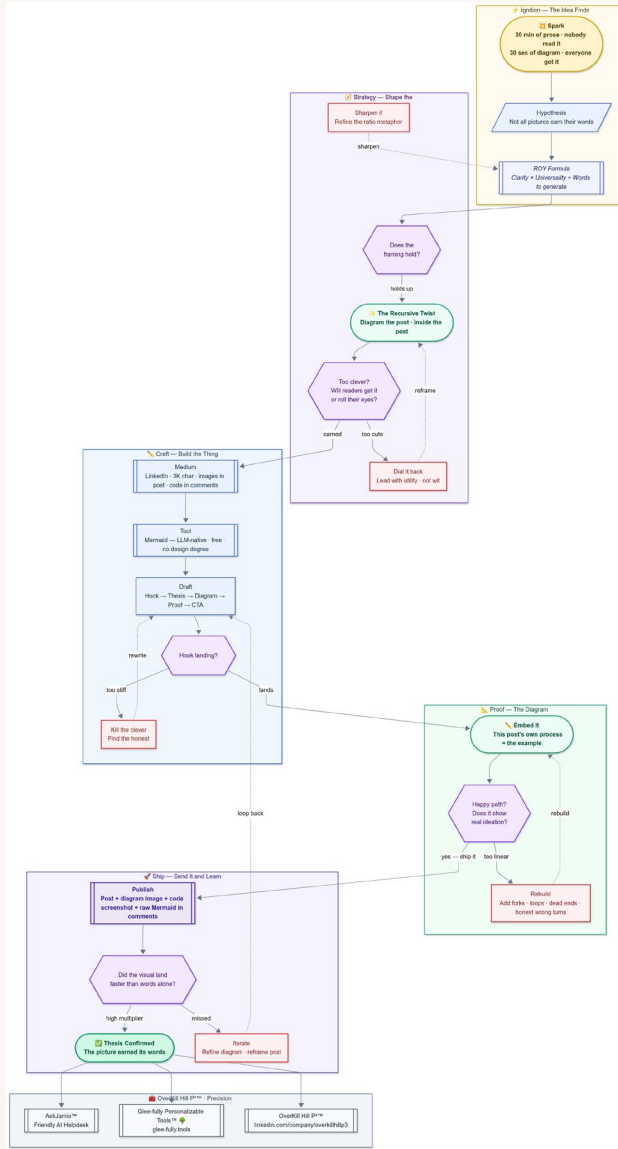

What to notice

- Has the narrative richness been translated into stronger visual structure?
- Is the recursion now more honest, or just more poetic?
- Did the diagram earn its elegance?

Judge's note

Claude tends to think beautifully. V2 wins if it also diagrams brutally.

 Claude V2

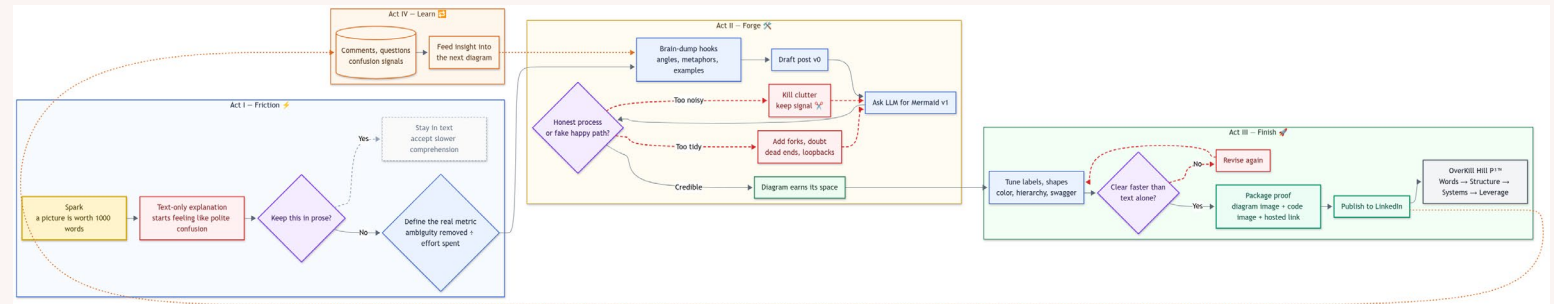

ChatGPT's RE-Design (using GPT 5.4 Heavy Thinking)

What to notice

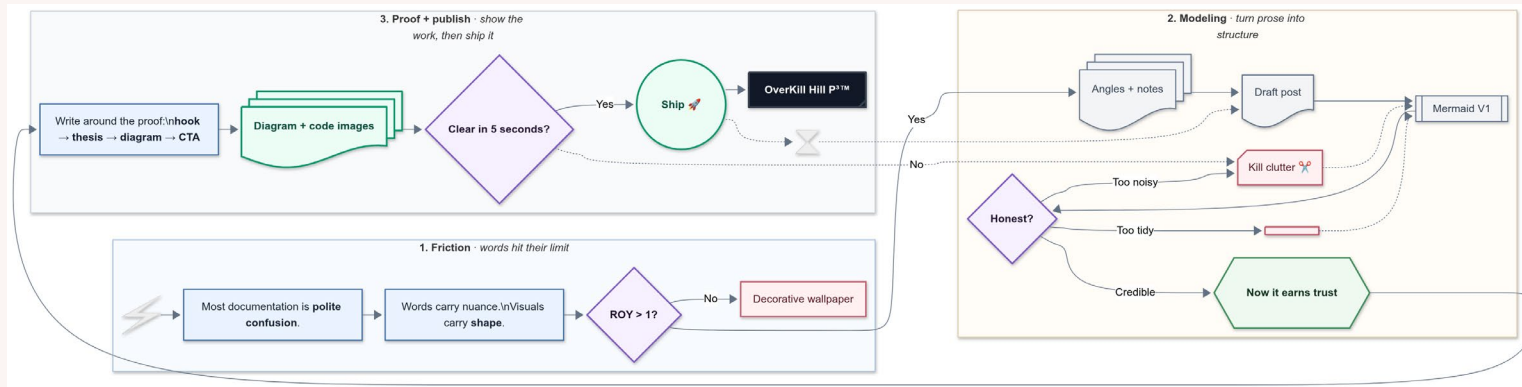

- Denser reasoning
- More explicit loop logic
- Better integration of brand, story, and mechanics

Judge's note

The heavy-thinking version should feel more deliberate, less merely clever.

ChatGPT's RE-Design (using GPT 5.4 PRO Thinking)

What to notice

- Does it push Mermaid farther as a medium?
- Do the added features serve the theme, or just flex the tool?
- Is this a diagram... or a small poster?

Judge's note

This is the “art of the possible” slide: feature-rich, more theatrical, and intentionally trying to wow.

ETCH-AI-SKETCH

FINAL READ — WHAT THIS CONTEST ACTUALLY MEASURED
NOT JUST DIAGRAMMING.

- Taste under constraints
- Honesty in showing nonlinear thought
- Ability to turn words into structure without losing meaning
- The difference between “generated” and “designed”
